

## Technical Data

### Divider & Corner Jointing Strips for Glass Panels (10 & 12mm thickness)

(for interior applications only)

#### Introduction:

Our Divider & Corner Jointing Strips are manufactured from Polyethylene terephthalate, normally abbreviated to PET. It is the most common thermoplastic polymer resin of the polyester family.

PET has some very desirable properties that include lightness, strength, and impact resistance.

With PET being naturally transparent, its light transmission qualities exceed 80% of visible light.

Being produced from PET, GA's transparent Divider & Corner Jointing Strips are an ideal way to achieve an almost seamless effect between glass panels.

PET is commonly "recycled" and thereby reduces the amount of waste going into landfills.

#### Notes:

- Stock lengths are 3 metres long.
- Dimensions on drawings are shown in mm.
